/*=====

PROYECTO FINAL.

OBJETIVO:

Crear un arreglo de 10 registros, que contenga la clave del trabajador y que sea numérica entero de 4 posiciones, Después crear un arreglo de 10 registros, que contenga el Nombre de personas que sea alfanumérico con Nombre, Apellido Paterno y Apellido Materno, finalmente crear un arreglo de 10 registros que contenga el salario del trabajador y que sea numérico real. Estos arreglos deben ser generados aleatoriamente.

Una vez creados los tres arreglos, el programa deberá presentarle al usuario un menú con las siguientes opciones:

- a) Mostrar todos los contactos (El contenido de los tres arreglos con su respectiva información de cada trabajador).
- b) Buscar un registro dando como parámetro el nombre o la clave del trabajador. (Por las dos formas).
- c) Ordenar alfabéticamente por clave, nombre o salario.
- d) Insertar nuevos registros.
- f) Eliminar un registro por clave o nombre (Por las dos formas).
- g) Modificar la clave, el nombre o el salario de algún trabajador. (Por las 3 formas, pero debe elegir cual de ellas)

AUTORES:

- Luis Manuel Flores Jiménez
- Aldo Raúl Fernández Aguilar
- Juan Francisco Gallo Ramírez
